EXPERIENCE

HUJJ APP (Upcoming Project) | FULL STACK DEVELOPER

Remote (Team Collaboration)

- Developing a mobile app designed to guide Muslims during Hajj and Umrah, offering features such as schedules, real-time guidance, and essential resources.
- Collaborating with a team of 5 programmers to build a user-friendly interface and ensure the app's functionality across different devices.
- Implementing essential features such as prayer timings, location-based guidance, and educational content to assist pilgrims.
- Ensuring the app's accessibility for Muslims worldwide by focusing on multilingual support and offline functionality.

PROJECTS

LIBRARIA | REACT | CHAKRA UI | RECOIL | NODE.JS | EXPRESS.JS | MONGODB | JWT

- An e-library platform allowing users to browse, borrow, and return books digitally.
- A 15-day book borrowing system with automatic notifications for due dates and overdue books.
- User-friendly book browsing and search functionality with secure user authentication and profile management.
- Admin panel for managing books, user activity, and tracking borrowed/returned books.
- Detailed tracking system to manage borrowed books and return deadlines.

STARTUPHUB (Tutorial) | NEXT.JS | TYPESCRIPT | SHADCN | SANITY | TAILWIND CSS

- A platform that allows users to create their own startup profiles, post details about their projects, and connect with potential investors.
- NextAuth.js enables secure user authentication with GitHub for account creation and login.
- Users can create and manage their startup profiles, including business descriptions, goals, and funding needs.
- Search functionality for users to explore and filter startups based on various categories and criteria.
- Real-time project showcase for startups, where they can post updates and attract investors.
- Dynamic, responsive UI built with ShadCN and Next.js, providing a smooth and engaging experience across devices.
- Content management with Sanity, allowing seamless updates and management of startup profiles and user data.
